

Felipe Postigo

Commercial Strategy | Applied AI

I am a Michigan Ross MBA and commercial strategy operator focused on applied AI, pricing, automation, and business systems. My work sits at the intersection of business judgment and technical execution: translating ambiguous problems into models, workflows, dashboards, and AI-enabled systems that improve decision speed. I am especially interested in roles where AI, strategy, operations, and product thinking intersect.

ML Forecasting and Margin Risk Detection

PROTOTYPE

Built forecasting and margin-signal prototypes to flag business risk earlier, support planning conversations, and turn model output into commercial decisions. Forecasting work reached 90%+ accuracy.

Business Workflow Automation System

PRODUCTION

Turns recurring manual processes into scheduled, monitored execution loops. Shows how business teams can move from one-off analysis to always-on operating systems that save time and reduce follow-up load.

Finance Intelligence and Decision Support

PRODUCTION

Local decision-support system for transaction classification, anomaly detection, and spending visibility — a practical prototype for AI-assisted FP&A and commercial planning workflows.
